

# Security Camera

## Kens.co, Japan

March 9<sup>th</sup>,2017

## Key advantages over Present security cameras now a days :

No DVR/Recorders

Kens.co has customized a security camera which DVR or Recorder has not required. That will save extra cost and hassle to maintenance that item. Also it consume remarkable power to run for 24HRS

No Hard Disk

No cost for Hard Drive. GB or TB will cost more than a cheap SD card isn't it? Replacing Hard Disk is also not easy for the rural people or villagers as well. Also not available in the disasters area.

Hard Disk Crash

You need cool place to keep such DVR or HD all the time. If it is crash or bad sectors or over heated that will crash and will lead to spent more bucks as a result. Here there is no chance if you use our security camera.

No Monitor

Monitor is a common accessories for any security camera now a days. It require space, extra power consumption, extra cost if tube is over heated for continuous running. For rural areas or villages people do not have much budget to buy a monitor. So Kens.co customized this idea for all kinds of areas for security purposes.

32GB SD card

Kens.co use 32GB SD card which you can run 2 weeks or 16days as well. It is best evidence to bring to the police instead of heavy DVR or recorder or investigators will visit your place to check the recorder. Also SD card is so cheap and affordable for every one.

Drop Voltage using long wires

This for your kind information if you use long wire it may cause to drop the voltage which will hamper the security camera. Most of the Chinese camera crashed due to such reasons but we do not know. Kens security camera you do not need to use such long wires to connect camera or DVR. Also you can save extra cost on long wires as well.

Extreme Areas

Everybody is thinking about the wifi connection to the mobile to check the security camera but how many % successful to catch the thief or terrorist while you check the mobile phone through security camera ? If there is bad network or no network of wifi how you can check your camera. How about the security of every places of the state or government? Kens security camera is just simple and worthy in that purpose. You can use both solar or AC connection to the security camera.

Japan's super thin solar

Kens.co Japan is using super thin 1mm amorphous solar sheet for the security camera for the first time. And the test result is outstanding while we use in many project like in Nigeria and Kenya. Max space on the pole and sunlight can be use. That Means your security pole is more light than traditional crystal solar panel in the market.

AC connection at home

Kens.co has customized this security camera in such a way so that you can use your home ac connection if electricity is available at your area. Just wire connection is needed for this matter. Or you can use indoor if it is not necessary to use outdoor. Both can be possible.

No need 24hrs manpower

For government or state offices, residential areas, roads you need manpower 24hrs to check on monitor. Also you need room space which will cost more. So in that case you do not need any cost of checking 24hrs if you use Kens security camera. Big amount of cost savings.

Easy install

Simply function will lead to easy installation as well. No complicated tools or training to do so. Ensuring access to all kinds of people in the world. Also ensuring the security to each and every corner of the state.

Easy remove SD card

Easy rubber cap is using to remove 32GB SD card in the security camera. It is not complicated to do. No need any tools or special knowledge to remove such SD card.

Special customized version  
from Japan

As you may wonder why kens security camera is so simple comparing other cameras in the market? Though there are other high tech security camera from Japan but it is special customized for the developing countries where high tech is not available properly or risk for other factors to maintain of high performance security camera.

Saving Extra cost

Highway 24hrs security, rural area`s entrance and exit point, your storage security or other corners of the buildings you need 24 hrs security guard to check or are you able to continuously shifting your channel on mobile phone screen? What you will do when mobile network or wifi network is not working in some parts of the area? When any disaster hit the area how it is possible to feedback without electricity. Hope not to explain more about it`s simple functions to cost minimize. DVR, Extra long wire, Monitor, Security man for guard, Extra space for instruments all costs are sweep away from our list.
